

# HYTERA BODYCAMS

*RECORD, CHECK, RESPOND*

[hytera-mobilfunk.com](http://hytera-mobilfunk.com)

# SEE EVERYTHING MISS NOTHING

Modern bodycams are smaller, lighter and increasingly sophisticated in the type of features they now support including; full HD video quality, infrared, night vision, integration with wearable equipment and even the ability to stream live footage to other devices. A feature which is especially possible when combining a Hytera Bodycam with a Hytera PDC760 Multi-mode Advanced Radio or utilising the new Hytera VM780 Bodycam which has built-in LTE.

Bodycams are typically used by police, fire and ambulance services, but they are also issued to prison staff, private security officers, healthcare workers, railway workers, traffic wardens and parking attendants, any workers who may face abuse and the threat of violence in their jobs.

Studies have shown Bodycams to be pro-active against verbal attacks and aggression, as many people calm down when they know they are being filmed. These cameras therefore serve as an additional protective measure for field and lone workers.

Choosing the correct Bodycam for your requirements is essential, but with the full range of Hytera solutions there is a product to meet all needs and budgets.

## VM550D

The VM550D offers all the rich features of the VM550 including Full HD video, with the added bonus of a 2" display allowing users to playback and review captured video instantly. It also has Night Vision for use in low light environments.

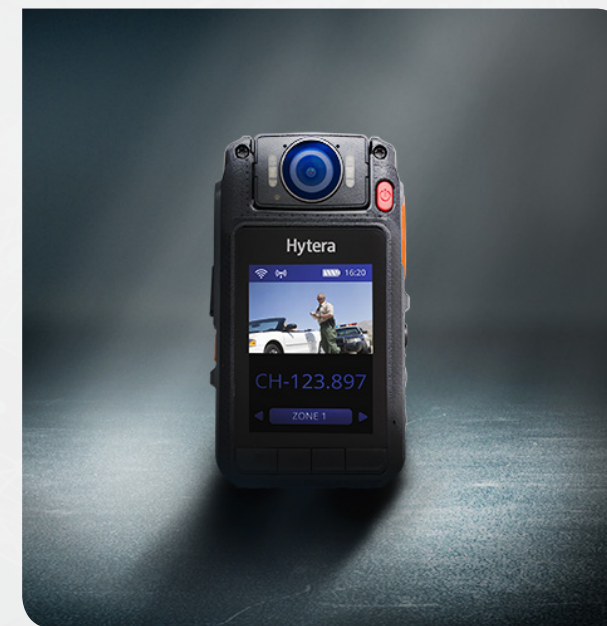

- 2" display
- 1080p HD video
- 139° diagonal lens
- 7+ hours continuous battery life
- Built-in Wi-Fi & Bluetooth function
- IP67 and MIL-STD-810G

## VM685

The VM685 gives users more flexibility, with features including a 180° rotatable lens and powerful battery life supporting up to 8 hours continuous recording. The VM685 also increases security by incorporating 256 Bit Advanced Encryption.

- 2.4" display
- 1080p HD video
- 180° rotatable lens
- 8+ hours continuous battery life
- 256 Bit Advanced Encryption
- Built-in Wi-Fi & Bluetooth function
- IP67 and MIL-STD-810G

## VM780

The VM780 takes RVM Bodycams to the next level with the most advanced range of features available, including; a 2.8" touch display, powerful battery life supporting up to 8 hours continuous recording and 3G/ 4G & Wi-Fi for real time transmission anywhere, NFC and GPS built-in and PoC application compatibility.

- 2.8" touch display
- 1080p HD video
- 216° rotatable lens
- 8+ hours continuous battery life
- Advanced 256-bit encryption
- Built-in 3G-/4G-/Wi-Fi & Bluetooth function
- Integrated NFC and GPS
- Compatible with PoC applications
- IP67 and MIL-STD-810G

## DIGITAL EVIDENCE MANAGEMENT PLATFORM

Digital Evidence Management platform collects and stores the digital evidence on a secure network. Easily find data by tagging an evidence file and find it later through a key word search. For extra data security, manage customised permissions to different users.

- Central data management
- A cloud server enables central storage and automatic uploading of files.
- Collection system for retrieving and sorting evidence, and assigning it to case, position data via Global Navigation Satellite System (GNSS)
- Designed for the smooth collection and management of large amounts of data
- Extensive user interface, compatible with other systems
